

intensive  
clarity  
treatment:  
0.5% pure retinol  
night

The power of 0.5% pure retinol paired with phytic acid, phenylethyl resorcinol and gluconolactone delivers the ultimate nighttime treatment for those prone to breakouts and hyperpigmentation. This exceptional formulation provides unsurpassed corrective benefits for the fastest results possible without a prescription.

#### before

Condition: acne, acne scarring and post-inflammatory hyperpigmentation.\*

#### after

Solution: applied BPO 5% Cleanser, Intensive Clarity Treatment, Pigment Gel®, Brightening Therapy with TrueTone, Clearskin and Perfecting Protection SPF 30 daily and received a series of Sensi Peel® treatments over a three-month period.\*

\*Photos not retouched.

#### Key ingredients:

**0.5% Pure Retinol (Vitamin A)** – is converted to retinoic acid in the skin and helps to normalize cell turnover and increase water content in the epidermis. The retinol used in Intensive Clarity Treatment is stable and completely pure, making it highly potent and effective. It decreases follicular keratinization to reduce the occurrence of breakouts and evens pigmentation by inhibiting melanosomes from being transferred from the melanocytes into the keratinocytes.

**Vigna Aconitifolia Seed Extract** – is a botanical that has demonstrated the ability to stimulate the growth factors that increase epidermal cell turnover.

**Syringa Vulgaris (Lilac) Leaf Cell Culture Extract** – is the most active component of lilac leaf. Its major component is verbascoside, a potent antioxidant derived from the stem cells of the lilac plant. Lilac stem cell extract has been shown to inhibit sebum production and the melanogenesis process.

**Bakuchiol** – is a potent antibacterial agent that controls excess oil production while also providing anti-inflammatory activity, MMP inhibition and antioxidant benefits.

**Phenylethyl Resorcinol, Licorice Extract and Phytic Acid** – act as potent melanogenesis inhibitors, aiding in the clearing of discolorations.

**Gluconolactone** – is a naturally occurring, non-irritating, antioxidant poly hydroxy acid (PHA). It provides strong anti-inflammatory action and dramatically reduces the number of both inflamed and non-inflamed lesions while providing moisturizing and barrier-strengthening properties.

**Directions for use:** in the evening, apply a pea-sized amount after cleansing and toning. Begin by limiting use to twice a week, gradually increasing application frequency to every other night, and then advancing to each evening or as tolerated. Follow with the appropriate PCA SKIN moisturizer. Mild irritation may initially be experienced and is not a sign of a negative complication. This product is indicated for use in the evening only. Daily broad-spectrum sun protection is critical while using this product.

**PCA** skin®
